## CHALLENGES

The new types of diseases in animals and their transfer to humans via their product consumption and companionship are escalating the animal healthcare market globally. The role of veterinary labs becomes pivotal here. In most cases veterinary labs focus on funds, personnel, equipments, suppliers however some of the issues they should focus on to meet the challenges at the moment as well in the future are:

- More complex problems of designing and executing appropriate sample collection scheme needs to focus on. Comprehensive out the box veterinary reports need to generate.
- The guarantee of the quality of analytical data is a basic quality requirement for veterinary certification, it is hence important for the labs to automate operation standards.
- Veterinary laboratories are facing challenges to produce quick and quality documentation their clients, manual paper documents becomes troublesome in audit trail.
- Veterinary Lab slowly needs to provide 24 hour emergency services to their clients from anyplace, anytime.

## FEATURES OR CAPABILITIES

- Comprehensive tracking and monitoring of veterinary samples from booking-in through testing to result reporting and sample disposal
  - 1) **Diagnostics, Receipt and storage of isolates.**
  - 2) **Production Initiation.**
  - 3) **QC testing and product release. d to enter test results.**
  - 4) **Development**
  - 5) **Sampling to result entry to invoicing and more**
- Comes with Client portal & Mobile Apps for lab's customer to download reports
- Manage Inventory – Manage lab consumables and instruments with calibration reminder.
- Powerful Calculation Capabilities – Automated calculations are set for veterinary testing to accelerate workflows and efficiency.
- Integrated Audit Trail – Allows lab analyst to track down problems that can arise whenever veterinary testing data is modified intentionally, maliciously or in error.
- Quick generation of Diagnostic Certificates in your templates
- Billing & Invoicing against completed jobs/orders.
- Integration with accounts, instruments and third party software.

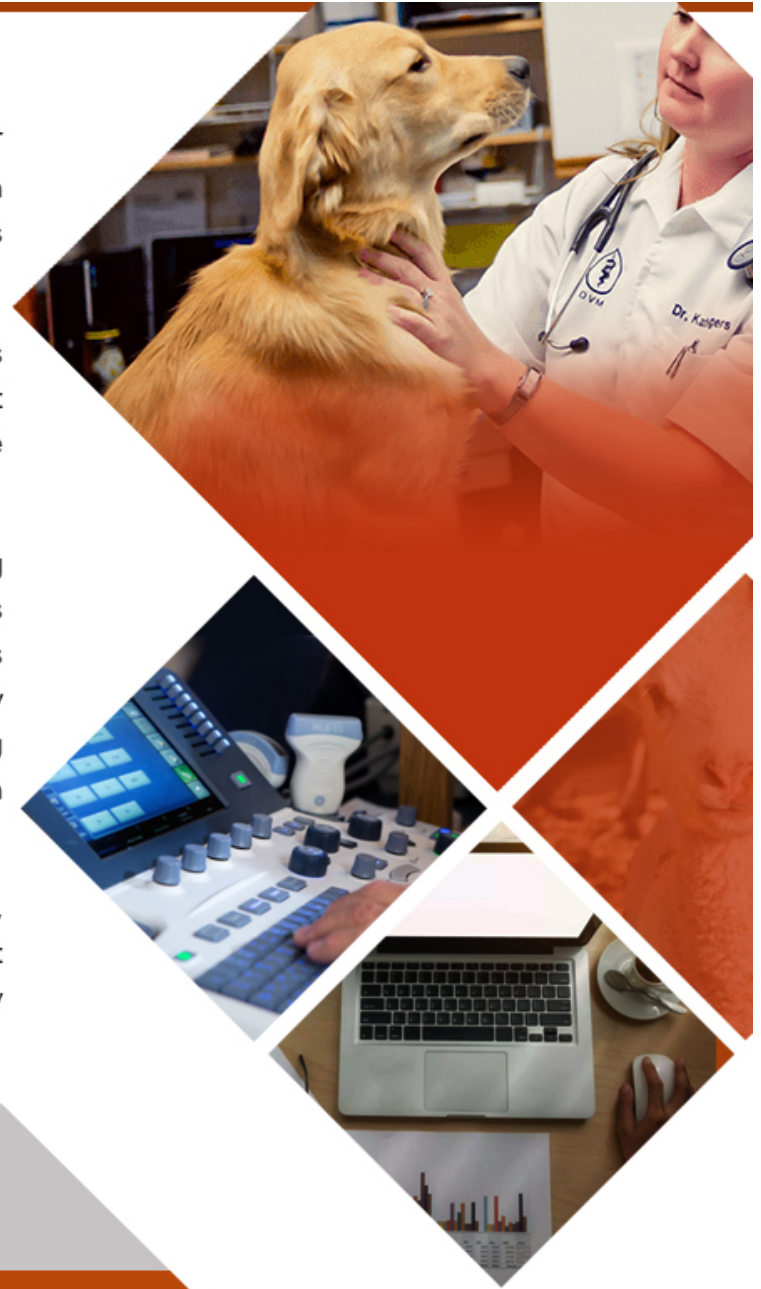

## BENEFITS

**End to end Veterinary Management** - Labsols VET LIMS simplifies and speeds up the process of booking in and processing submitted animal samples for analysis in a veterinary laboratory.

**Reduces Tracking time in VET Lab** - Features such as rapid barcode scanning, automated invoicing and short code dictionaries (animal species, etc.) reduce the time needed for tracking work in the system.

**Flexibility to accommodate any future changing requirements** - Labsols LIMS can easily be modified as per workflows of the laboratory in future such as changes to workflows or sample testing. This versatility ensures a longer operational life for the system leading to lower cost of ownership and improved return on investment.

**Audit trails**, time and date stamping of all actions, version control of all reference data such as test definitions help compliance with regulatory requirements.

## INTEGRATIONS

### Labsols VET LIMS Integration capability & other add-on tools -

- LIMS integration with accounts, bar-coding
- LIMS integration with devices and instruments
- LIMS integration with CRM and support system
- LIMS integration with Document Management System
- Comes with BI (Business Intelligence) & KPI Information from various view.
- Comes with Customer Mobile Apps - to give flexibility for more information access on demand on the move
- Comes with Customer Portal - to view/download certificates, see invoices, raise issue log and more
